<https://my.newtonschool.co/playground/code/eqkl0wizy38p>

1. $\text{newNode.data} = 5$

2. If $\text{Begin} = \text{Null}$ // if LL is empty
 $\text{newNode.next} = \text{null}$
 $\text{newNode.prev} = \text{null}$
 $\text{Begin} = \text{newNode}$

3. If $\text{newNode.info} < \text{Begin.info}$
 $\text{newNode.next} = \text{Begin}$
 $\text{newNode.prev} = \text{null}$
 $\text{Begin.prev} = \text{newNode}$
 $\text{Begin} = \text{newNode}$

4. Set $p = \text{Begin}$

if $(\text{newNode.info} \geq p.\text{info}) \ \&\& \ (\text{newNode.info} < p.\text{next.info}) \ \&\& \ (p.\text{next} \neq \text{null})$
 $\text{newNode.next} = p.\text{next}$

newNode.prev = p.prev

p.next = newNode

newNode.next.prev = newNode

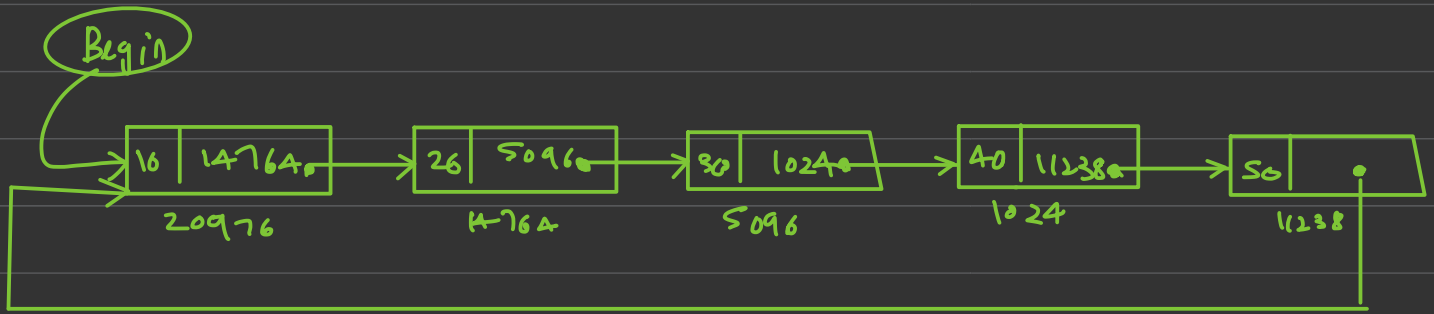

else if p.next == null

newNode.prev = p

newNode.next = null

p.next = newNode

Circular Linked List

Traversal

1. If $\text{Begin} = \text{null}$
print "CLL is empty"

2. Print $\text{Begin} \rightarrow \text{info}$

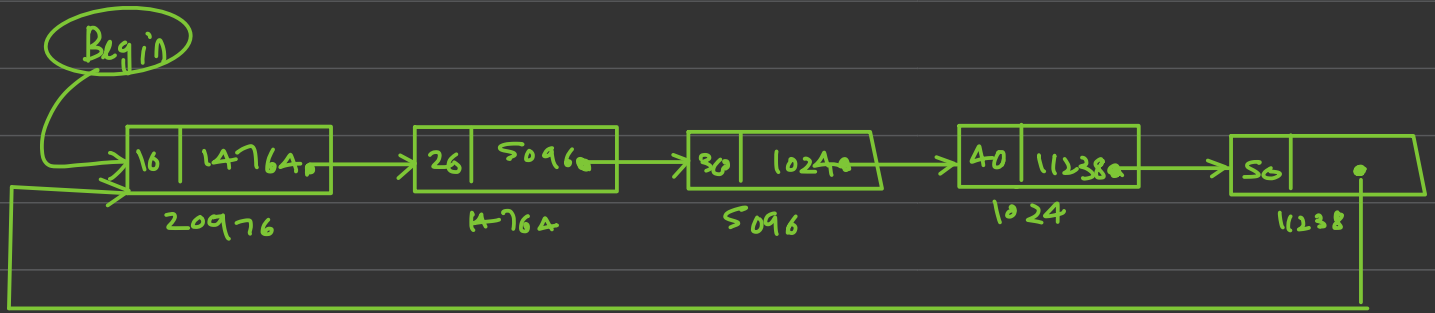

3. Set $p = \text{Begin} \rightarrow \text{next}$

while $p \neq \text{Begin}$
print $p \rightarrow \text{info}$
 $p = p \rightarrow \text{next}$

18 June 2023

Insertion in CLL: Beginning (at start)

1. Create new
new.info = data

2. If Begin = null // If CLL is empty

new.next = new

Begin = new

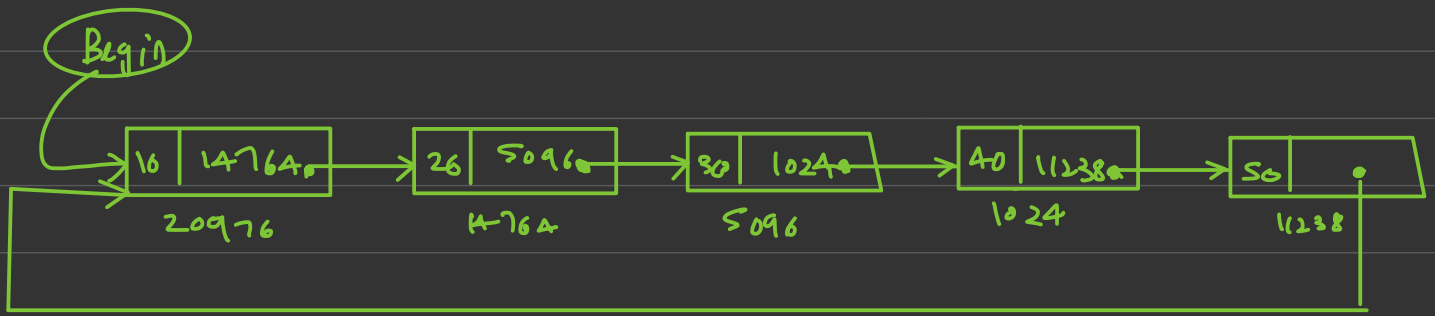

3. Set p = Begin

while p.next != Begin
p = p.next

4. new.next = Begin

p.next = new
Begin = new

Insertion in CLL: Ending

1. Create new
new.info = data

2. If Begin = null // If CLL is empty

new.next = new

Begin = new

3. Set $p = \text{Begin}$

while $p.\text{next} \neq \text{Begin}$

$p = p.\text{next}$

4. new.next = Begin

$p.\text{next} = \text{new}$
