BINARY SEARCH ALGORITHM

Find - '75'

1	3	12	14	23	34	55	65	75	78
0	1	2	3	4	5	6	7	8	9

Iteration 1 - $l=0, h=9, m=\frac{0+9}{2}=4$
 $\because a[m] < search$
 $l = m+1$
 $m = \frac{5+9}{2} = 7$
 $\because a[m] < search$
 $l = m+1$
 $l = \frac{8+9}{2} = 8$

Iteration 2 - $arr[mid] < 75$

Iteration 3 - $arr[mid] == x$

SIMPLE SNIPPETS - Tanmay Sakpal

search = 24

$$l=0, h=8, m=\frac{0+8}{2}=4$$

$\therefore a[m] > \text{search}$

$$h=m-1$$

$$m=\frac{0+3}{2}=1$$

$\therefore a[m] < \text{search}$

$$l=m+1$$

$$m=\frac{2+3}{2}=2$$

$\therefore a[m] == \text{search}$

found at index m.

0	1	2	3	4	5	6	7	8
10	12	24	29	39	40	51	56	69

$A[\text{mid}] = 51$
 $A[\text{mid}] < K$ (or, $51 < 56$)
So, $\text{beg} = \text{mid} + 1 = 7$, $\text{end} = 8$
Now, $\text{mid} = (\text{beg} + \text{end})/2 = 15/2 = 7$

binary search - Google Search x binary-search-algorithm3.png x +
static.javatpoint.com/ds/images/binary-search-algorithm3.png

Search = 111

$$l=0, h=8, m=\frac{0+8}{2}=4$$

$$m=\frac{5+8}{2}=\frac{13}{2}=6$$

$$m=\frac{7+8}{2}=\frac{15}{2}=7$$

$$m=\frac{8+8}{2}=8$$

repeat this while ($l \leq h$)

0	1	2	3	4	5	6	7	8
10	12	24	29	39	40	51	56	69

$A[\text{mid}] = 51$
 $A[\text{mid}] < K$ (or, $51 < 56$)
So, $\text{beg} = \text{mid} + 1 = 7$, $\text{end} = 8$
Now, $\text{mid} = (\text{beg} + \text{end})/2 = 15/2 = 7$

$\therefore l = h$, we stop & conclude 111 is not present in the array.

0	1	2	3	4	5
8	7	5	11	15	2

$n=6$

2 5 7 8 11 15

2 5 7 8 11 15

Pass I

after Pass I, the largest no in the array i.e. 15 is at its right position

Pass II

After Pass II, 2nd largest no in the array is at its right position i.e. second last

Pass III

Pass IV

Pass V

2	5	7	8	11	15
---	---	---	---	----	----

2 5 7 8 11 15

2 5 7 8 11 15

2 5 7 8 11 15

2 5 7 8 11 15

2	5	7	8	11	15
---	---	---	---	----	----

Pass VI

If $n=6$, #passes reqd = 5

i.e. we give a sorted array of 20 values, it will take 20 passes everytime comparing these values even when it is just not reqd

That is the biggest disadvantage of Bubble sort & hence it is considered as one of the worst sorting

Algorithms.

H/w: Just as shown above, sort the below elements using Bubble Sort.

0	1	2	3	4	5	6	7	8
6	7	8	9	5	4	3	2	1

$n=9$
